

LIVEQUE BRAND IDENTITY

Logo Concepts & Brand Rationale

10 ranked concepts - research-driven - every file print-ready vector

Prepared for Glen & Isaac Irvin - getliveque.com

July 27, 2026

METHOD

Built like a research firm, not a mood board.

Fifteen research and design agents ran in three waves before a single mark was drawn. Five research bots audited the category, mapped the symbolism, set color and type strategy, defined swag production constraints, and dissected the name itself. Four design bots then generated twelve concepts across four deliberate territories. A brand-director pass killed the weak ones, ranked the survivors, and wrote the rationale you are holding.

01 RESEARCH

Category audit - symbolism map - color & type strategy - swag constraints - the name "LiveQue"

02 CONCEPTS

Four territories: Q lettermark - custom wordmark - queue-as-soundwave - emblem / coin

03 SYNTHESIS

Adversarial curation: duplicates killed, survivors ranked 1-10, usage rules written

The category is crowded. The Q is empty.

BANNED CLICHES

Soundwave bars, play triangles, music notes, vinyl-as-decoration, microphones. Overused by every music app, and most signal passive playback - the opposite of a live, participatory queue.

THE TEAL COLLISION

Bandsintown - the biggest live-music discovery brand - owns a teal nearly identical to ours. We keep teal but bias it deeper (#17B7AE), live on a near-black ground, and add gold for the money moment. The mark, not the color, carries distinctiveness.

THE OPENING

Nobody in the category brands around a single ownable letter. The Q is a gift: a circle that reads as coin, coaster, vinyl or token, with a tail that reads as cue. And it maps to the one mechanic only LiveQue has - the queue.

What signals LIVE: a single pulsing on-air dot. What signals SAFE WITH MONEY: restraint - simple, solid, geometric marks, the visual language of payment brands. Every concept in this deck obeys both.

One Q, four meanings.

QUEUE

The list itself. Requests stack, tips jump the line. The product mechanic, made visible.

CUE

The musical moment - cue the next song. The Q tail is the cue: a needle, a fader, a tick.

LIVE

The on-air dot. One teal pulse says "happening right now" without borrowing Shazam's ripple.

TOKEN

A coin, a bottle cap, a coaster. The bar-table object you would buy the band a drink with.

Every ranked concept leads with at least two of the four. The strongest lead with three.

SYSTEM

Ink ground. Teal is live. Gold is money.

INK
#0B0F12

The ground. Dark-room stage backdrop; the surface QR and coaster art live on.

TEAL 500
#17B7AE

Core brand ink for marks and wordmarks. Fintech-calm, survives 1-color screenprint.

TEAL HERO
#4ECDC4

Bright step for the live dot and accents on Ink, where it pops at ~10:1.

TEAL DEEP
#0E7A72

For light stock - the mark never washes out on white or kraft.

SOFT WHITE
#E8EDF0

Text on dark. Soft, not pure white, to avoid halation on Ink.

GOLD
#F5A524

Reserved for one job: the money moment. Tip landed, boosted to #1. Scarcity makes it an event.

Rule: the live dot is always teal; gold appears only when money lands. Never both jobs in one color, never the whole mark in gold. Every logo also ships one-color: solid teal, solid black, or white knockout.

SYSTEM

Marquee display. Money in Inter.

LiveQue

CLASH DISPLAY

Display / wordmarks - confident geometric grotesk with a Q worth owning. Free for commercial use (Fontshare).

LiveQue

MANROPE EXTRABOLD

The rounded, fintech-friendly voice - used on the On-Air wordmark. Open license (OFL).

LiveQue

CABINET GROTESK

Warmer, printed-beer-mat personality for emblem lockups (Needle Drop, Coaster Seal).

LiveQue

SPACE GROTESK

All-open alternate display, so the brand never depends on a single foundry.

LiveQue

INTER

Product UI and ALL money. Tabular numerals so tip totals align and read as trustworthy.

RULES

Five rules that keep it LiveQue.

1

Live dot = teal, tip/boost = gold, and never mix the two signals: the on-air dot stays teal (#17B7AE / #4ECDC4 on dark) for 'live now'; gold (#F5A524) appears only on the money moment. Don't turn the whole mark gold or scatter gold as decoration.

2

Every mark must pass the one-ink test. Before shipping any swag, prove the logo in solid teal, solid black, and white knockout with the dot collapsed to the same ink. If it dies without the accent color, it's wrong - don't ship gradients on shirts, stamps, or embroidery.

3

Protect the counter and clear space. Give the Q/dot at least one dot-diameter of quiet zone and never let the counter close up: on favicons and sub-48px icons, drop the fine details (inner grooves, milled edges, double rules) rather than let them clog.

4

Put the QR in its own quiet zone. On coasters and table tents, keep the logo and the scannable QR visually separate with ≥ 4 -module clear space - the coaster/coin/cap art frames the QR, it never overlaps or tints it. Never place tip amounts or personal data in a QR's URL.

5

Money type is always Inter tabular. Don't set dollar amounts, tip totals, or queue positions in Clash/display faces; keep all transactional numerals in Inter (or Geist/Space Mono for console positions) so figures align and read as trustworthy.

1 On-Air Q (the coin)

A single fat-ringed Q that reads as a coaster/coin/token, with the live 'on-air' dot floating dead-center in the counter and one short 45° tail-tick doing the queue-jump.

WHY IT FITS

This is the trust-forward flagship. The thick, symmetric ring borrows payment-brand restraint (Cash App / Apple Pay 'chip' solidity) so it reads 'safe with money' - critical for a Stripe app. The circle doubles as the round bar coaster the QR sits on and as a tip coin/token. The centered dot is the honest 'live/real-time' signal (broadcast record dot, online-status dot) without copying Shazam's ripple or Spotify's arcs, and it's the natural thing to pulse in-app. The stubby tail is both ...

CONSTRUCTION

viewBox 64x64. Ring: circle centered (30,30), stroke-width 9, radius 18.5 (outer 23, inner 14) - a bold annulus, no hairlines. Tail: a single round-capped bar of the SAME 9-width running along the 45° axis from (41,41) to (53,53), crossing the ring's lower-right edge and protruding just past it (classic Q seam). Live dot: solid circle r5.5 at the exact center (30,30), fully surrounded by the 14-radius counter's negative space with even margin. Silhouette is one clean shape + one ...

COLOR

BodycurrentColor (black #0B0F12 on light, white #E8EDF0 on dark). Live dot Teal #17B7AE (bump to bright #4ECDC4 on the #0B0F12 ground, deep #0E7A72 on white). Ground #0B0F12. Optional warm tip-accent Gold #F5A524. One-color fallback: entire mark (dot included) in solid #17B7AE ...

TYPE

Wordmark 'LiveQue' set in Clash Display Semibold (Fontshare, free-commercial) with this custom Q swapped in as the load-bearing letter; free alternative Space Grotesk Bold. UI/money in Inter ...

ON SWAG

App icon: centered on flat #0B0F12 tile, teal dot pops - instantly 'live.' Sticker: near-convex silhouette die-cuts cleanly, no spikes. 1-color shirt: solid teal or white knockout, zero gradient dependence, survives screenprint knockout. Coaster: the ring literally IS a coaster; print deep ...

WHY #1

The flagship. One glyph resolves all four meanings the name demands - queue + cue + live + money - in a payment-chip-solid silhouette that reads 'safe with Stripe' and doubles as the literal coaster the QR sits on. Perfect scaling, die-cuttable, stitchable, and the teal center dot is the ...

1-COLOR BLACK

REVERSED ON INK

ON BRAND TEAL

2 Queue Jump

A stacked list of rounded rows read top-to-bottom as a queue and left-to-right as a waveform (width = amplitude = tip size); the longest row has jumped to #1 and carries a live dot on its trailing edge.

WHY IT FITS

The clearest 'queue' of the set - four aligned rows are unmistakably a request list - while the ragged right edge traces an audio waveform, so a single mark says list and sound at once. The top row is the widest because the biggest tip bought the loudest, top spot; the teal dot at its end signals it is live and playing now. It maps 1:1 onto the product's core verb: a tip jumps a request to the top in real time.

CONSTRUCTION

64x64 field. Four horizontal pill-rows, each 8 tall, rx=4, all left-anchored at x=6 (the shared left edge = a list). Vertical pitch 14 (row tops y=8,22,36,50; 8/6 margins). Widths vary to trace a waveform on the right: 44, 30, 38, 22 (right edges 50,36,44,28 = an up-down-up contour). The top row (y=8, width 44) is the promoted/tipped song, filled teal, with a live dot r=4 at (56,12) sitting just past its end with a 2-unit gap. Minimum gap between rows is 6 so they never merge ...

COLOR

Base rows currentColor (adapts light/dark). Promoted row + live dot Teal #4ECDC4 (brand hero; ~10:1 on #0b0f12). One-color fallback: single ink (Teal #17B7AE, Black, or white knockout) - the #1 row still reads because it is the longest row plus the trailing dot marker, independent of hue.

TYPE

Wordmark: 'LiveQue' in Clash Display Medium, mark stacked above or left; queue positions ('#3 -> #1') and totals in Inter / Geist Mono tabular for the live-console feel. Free alternate: Space ...

ON SWAG

App icon: four rows centered on #0b0f12, teal top row + dot legible at 48px. Sticker: die-cuts as a clean stack of pills (each row a fat capsule, no spikes). 1-color shirt: solid ink, the longest-row-with-dot hierarchy holds in pure black or white knockout. Coaster/table tent: rows ...

WHY #2

The clearest picture of the product's verb. Four aligned rows are unmistakably a request list, the ragged right edge is a waveform, and the widest teal top row + dot is the tipped song that jumped to #1 - list, sound, and the money moment in one mark. Maps 1:1 to the core loop, scales to 48px ...

ON BRAND TEAL

3 Cue Line

The Q's tail stops flicking and runs straight out as a horizontal cue line / channel fader, with the live dot riding it as the fader cap.

WHY IT FITS

One move makes the Q do triple duty: the extended tail is the musical 'cue,' a soundboard fader (live-console energy), and a level track that ends in a puck reading as the tip-coaster where the QR sits. The horizontal restraint is deliberately quiet and geometric, which is what reads 'safe with money' next to Stripe. The tail - not a music glyph - carries queue + cue + live, so the mark recovers everything the 'Que' spelling gave up.

CONSTRUCTION

'LiveQue' set solid in a bold grotesk, tight tracking (-1), cap-height H. The Q is redrawn so its diagonal tail exits the bowl at 4 o'clock and resolves into a straight horizontal bar, stroke weight 0.13H, sitting one bar-height below the baseline. The bar runs right past the final 'e' by ~one letter-width and terminates in a filled disc (the fader cap / cue puck / tip coaster), diameter = 2x the bar height, centered on the bar. Negative space: baseline-to-bar gap equals the bar weight ...

COLOR

Wordmark #E8EDF0 on Ink #0b0f12 (dark) / #0B0F12 on white (light). Accent bar + cap Teal 500 #17B7AE (dark-mode hero #4ECDC4). One-color fallback: whole mark in a single ink - solid teal #17B7AE, black #0B0F12, or white knockout #FFFFFF; bar and disc stay filled, zero gradient.

TYPE

Clash Display Semibold/Bold (Fontshare, free) with a custom Q whose tail is rebuilt as the horizontal bar; all-free alt: Space Grotesk Bold.

ON SWAG

App icon: Q-bug (circle + stub bar + cap disc) centered on Ink or teal tile, reads at 48px. Sticker: horizontal die-cut of the full lockup at ≥ 1.5 in, simple convex silhouette. 1-color shirt: single teal or white screenprint; bar + cap survive with no hairlines. Coaster: wordmark centered with the ...

WHY #3

The primary wordmark and the quiet, money-trust anchor of the system. One move - the Q's tail runs straight out as a cue line / channel fader ending in a puck - makes the letter carry queue + cue + live while staying geometric and Stripe-calm. Most versatile lockup, and its Q-bug reduces ...

ON BRAND TEAL

4 Crown Cap Q

The whole emblem is one giant Q built as a bottle cap: crimped teal crown, hollow counter, a tail poking out the lower-right, amber dot glowing in the middle - a stamp/pin-first monogram-as-object.

WHY IT FITS

Fuses the two hardest-to-mix jobs into a single silhouette: a bottle cap screams bar/nightlife and 'buy the band a drink,' while the letter it forms is the ownable Q. It is the boldest, most stamp-ready of the set - a solid mass with one counter and one tail, exactly what survives a 1-inch embroidery, a wax-seal stamp, or an enamel pin. The amber dot in the counter is the on-air/live cue, calm enough to still read 'safe with money.'

CONSTRUCTION

viewBox 100x100, center 50,50. Cap wall = teal ring (evenodd annulus), outer r40, inner counter r18 (a fat 22-wide band = the Q bowl and the cap in one). Crimped crown edge = dashed teal ring at r44, stroke 6, dash 3/3.4 - the beaded rim sits just outside the disc so it reads as bottle-cap crimps. Tail = a single thick teal line, stroke 13 round cap, 72,72 -> 86,86: it emerges from inside the ring and pushes past the crimp to ~r51 at 4:30, turning the cap into a Q. Counter r18 is open ...

COLOR

Teal #17B7AE cap + tail (~Pantone 3272C); amber #F5A524 live dot; ground near-black #0B0F12. One-color fallback: entire cap in #17B7AE, #0B0F12, or #FFFFFF knockout - the dot drops to the same ink or a punched hole and the bottle-cap Q is still instantly legible.

TYPE

Wordmark 'LIVEQUE' in Clash Display Bold (Fontshare), letterspaced caps for neon-marquee / venue-signage energy, with this cap bug as the standalone Q; amounts and queue positions in ...

ON SWAG

App icon: the cap fills the tile on near-black, crimps reading right down to 48px, tail giving it instant Q identity. Sticker: bold near-convex silhouette die-cuts cleanly with no fragile spikes except the chunky tail. 1-color shirt / hand-stamp: a solid teal or black knockout with one counter ...

WHY #4

The best swag object and the boldest bar/nightlife statement. A bottle-cap Q fuses 'buy the band a drink' with the ownable letterform in one solid mass with a single counter and tail - exactly what survives a 1-inch embroidery, a rubber bar-stamp, an enamel pin, or a 48px tile. Highest ...

ON BRAND TEAL

5 Live Rise

A single unbroken waveform line that pulses like an oscilloscope while stepping upward - each peak higher than the last - crowned at the top-right apex by a live dot: the request rising up the queue, in motion, right now.

WHY IT FITS

The most 'real-time' and most motion-forward of the set - one jagged line reads instantly as a live audio pulse (soundwave), while the steadily climbing peaks read as a request moving up the queue. It resolves the name's paradox in a single stroke: Live is the pulse, Que is the ascent, and the apex dot is the tipped song arriving at #1. Being one continuous line makes it the natural signature for the in-app animation where the wave climbs as tips land.

CONSTRUCTION

64x64 field. One open polyline, stroke width 8, round caps and joins (no hairlines): M7,50 to 19,34 to 28,44 to 38,22 to 47,34 to 57,10. Three peaks ascend left-to-right (y=34,22,10) with two dips (y=44,34), so the envelope trends up while zig-zagging like a waveform. The path terminates at the top-right apex (57,10), crowned by a filled live dot r=6 at (57,10) that caps the climb as the #1/live position. Peaks are spaced ~9-12 apart so they stay distinct; for a true 16px favicon ...

COLOR

Line `currentColor` (fully legible on both light and dark). Apex live-dot Teal #4ecdc4 (brand pulse; alt money-cue Gold #F5A524). One-color fallback: render line and dot in one ink - Teal #17B7AE, Black #0B0F12, or white knockout - the rising-waveform silhouette carries the whole meaning ...

TYPE

Wordmark: 'LiveQue' in Clash Display Bold, with the wave able to extend as an underline/kick beneath 'Que'; body and money in Inter tabular. Free alternate: Space Grotesk Bold.

ON SWAG

App icon: rising wave centered on #0b0f12, apex dot top-right; use the 2-peak simplification at the smallest tile. Sticker: die-cuts cleanly as one thick continuous ribbon ending in the dot - no islands. 1-color shirt: a single bold stroke, ideal for one-ink screenprint or embroidery (keep peaks ...

WHY #5

The most real-time, most motion-forward mark and the natural signature for the in-app animation - one continuous rising waveform that resolves the name's paradox in a single stroke (Live = pulse, Que = ascent, apex dot = arrived at #1). Distinctive and one-ink friendly; ranks here ...

ON BRAND TEAL

6 Queue Riser Q

The Q's tail is replaced by three ascending equalizer bars that double as a rising queue; the tallest, right-most bar is capped by the live dot - the boosted request now at the top, live.

WHY IT FITS

This is the motion-storyteller. It literally pictures the product's magic moment - tip -> your song jumps up the line - by fusing soundwave (music), an ascending stack (queue), and a live cap (now/next) into the Q's tail. Equalizer bars are overused as a STATIC mark, so here they're never the whole logo: they're the tail of an ownable Q and the seed of the signature in-app animation (bars rise as tips land). Bar-nightlife energy up front, still one clean Q.

CONSTRUCTION

viewBox 64x64. Bowl: circle (26,30) stroke-width 8.5, radius 17 - shifted left to make room for the tail. Tail = three round-cornered bars sharing baseline y=54, stepping up-and-right: bar1 x38 w6 top42 (short, overlaps the bowl's lower-right edge to form the Q seam), bar2 x47 w6 top34, bar3 x56 w6 top26 (tallest). Radii 3 on all. Live cap: solid dot r4 centered above bar3 at (59,21). The bowl's counter stays clean negative space; the 'live' signal rides the top of the queue instead of ...

COLOR

BodycurrentColor (black on light / white on dark). Live cap dot Teal #17B7AE (#4ECDC4 on ink, #0E7A72 on white). Optional: tint the tallest bar Gold #F5A524 in the 'boosted/tip' state so money warmth caps the queue. Ground #0B0F12. One-color fallback: all bars, bowl and dot in solid ...

TYPE

'LiveQue' in Clash Display Bold, with the wordmark's own Q tail echoing the equalizer step; free alt Space Grotesk Bold. Queue positions and timers ('#3 -> #1') in Geist Mono or Space Mono for ...

ON SWAG

App icon: reads as a Q with a lively tail even at 48px; the teal cap is the focal glint. Sticker: slightly wider silhouette; keep the three bars thick (6px) so they survive die-cut and don't neck. 1-color shirt: bold bars screenprint great as a single teal or white knockout; the ascending rhythm carries ...

WHY #6

The motion-storyteller lettermark: the Q's tail becomes three ascending EQ bars that literally picture tip -> jump up the line, and the rising bars are the seed of the signature in-app animation. Strong bar-energy and still one clean Q; ranks below the top marks because the EQ-bar tail is a ...

1-COLOR BLACK

REVERSED ON INK

ON BRAND TEAL

7 Needle Drop Q

The Q as a spinning record: a grooved ring with a center spindle, and the tail becomes a stylus/needle whose glowing tip - the live dot - sits exactly where the needle meets the groove ('now playing').

WHY IT FITS

The music-forward option that still keeps the Q as hero rather than drawing a literal turntable. The double-ring-plus-spindle instantly says 'record / music,' and the needle-tail is a legitimate reading of the Q's tail. Putting the live dot at the stylus contact point encodes the single most on-brand moment: a real human is performing THIS song, right now. It differentiates hard from flat-teal competitors by leaning into nightlife/vinyl warmth on the near-black ground.

CONSTRUCTION

viewBox 64x64. Record rim: circle (30,30) stroke-width 5, radius 18. One inner groove: concentric circle (30,30) stroke-width 3, radius 11 (the only 'grooves' - at true 16px it merges into a solid record, which is fine; drop it for the dedicated favicon cut). Spindle: solid dot r2.5 at (30,30). Needle/tail: round-capped bar stroke-width 5.5 from (40,40) to (53,53), crossing the rim at the lower-right Q seam and pointing out-and-down like a tonearm's stylus. Live dot: solid circle r4.5 ...

COLOR

BodycurrentColor (black on light / white on dark). Stylus live dot Teal #17B7AE (#4ECDC4 on ink, #0E7A72 on white). Ground #0B0F12. Gold #F5A524 reserved for the 'buy the band a drink' tip state. One-color fallback: whole mark in #17B7AE, black, or white knockout; at favicon size ...

TYPE

'LiveQue' in Cabinet Grotesk Medium (Fontshare, free) for a slightly warmer vinyl feel, or Clash Display Medium; UI in Manrope/Inter with tabular figures for amounts.

ON SWAG

App icon: the record + glowing stylus reads well at launcher sizes; drop the inner groove for the 16px/48px cut. Sticker: circular record shape is a natural round or die-cut sticker; the needle tip is the only protrusion, keep ≥ 3 mm border. 1-color shirt: knockout white on black tee looks like a lit ...

WHY #7

The most music-forward option - the Q as a spinning record with a stylus-tail whose glowing tip marks 'this song, now.' Beautiful vinyl warmth and keeps the Q as hero, but the inner groove clogs at small sizes (must be dropped for the favicon cut) and it leans more decorative than the ...

ON BRAND TEAL

8 On-Air

The tittle of the 'i' in Live becomes an oversized on-air / record dot with a faint pulse ring; the Q stays clean and geometric.

WHY IT FITS

The honest, uncrowded way to say 'live/real-time' - a broadcast dot placed literally on the word Live, not Spotify's arcs or Shazam's listening ripple. The dot is the single ownable hit and animates in-app as the queue updates or a tip lands (pulse), while the deliberately calm circle-and-tail Q keeps the whole thing Venmo/Cash-App trustworthy. It reduces to one dot at favicon size.

CONSTRUCTION

Camel-case 'LiveQue' in a rounded-geometric bold. The lowercase 'i' loses its normal small tittle; in its place a perfectly round on-air dot, diameter $\sim 0.22H$, centered on the i-stem, floating one dot-gap above the x-height. A concentric hairline ring (stroke $\sim 0.05H$) at $\sim 1.8x$ the dot radius reads as a live pulse (ring scales/fades in-app). The Q is a clean circle plus a short 45-degree tail stopping at the baseline - quiet so the dot is the only accent. Q-bug for icon = the Q with the same ...

COLOR

Wordmark #E8EDF0 on Ink #0b0f12 / #0B0F12 on white. Live dot + ring Teal #17B7AE (dark hero #4ECDC4); optional Gold #F5A524 dot for the 'tip landed' state. One-color fallback: dot becomes a solid filled tittle in the single ink and the pulse ring is dropped for mono, embroidery, or ...

TYPE

Manrope ExtraBold (800, OFL, free) - rounded, fintech-approachable camel-case LiveQue; alt Inter Black. Custom oversized round tittle on the i.

ON SWAG

App icon: the Q with the on-air dot in its counter, or the bare pulsing dot. Sticker: circular 'LIVE dot' badge beside the wordmark. 1-color shirt: solid dot prints cleanly; drop the ring for embroidery under 1in. Coaster: the on-air dot doubles as a now-playing indicator next to the QR.

WHY #8

The most elegant and honest 'live' wordmark - a broadcast dot on the i that pulses in-app and reduces to a single dot at favicon size. Clean and approachable, but it's the least ownable idea in the set (a dot on a wordmark is easy for anyone to land on), so it earns a mid-pack spot as a ...

Queue Climb

The letters step up left-to-right so the whole word ascends into the Q, with a live dot capping the peak - the word literally moves up the queue.

WHY IT FITS

This device pictures the product's verb: a tipped request rises up the line. The staircase resolves toward 'Que' as the hero and the dot at the top says 'your song, next, live.' It's structural, not decorative, so recognition survives in pure black and in embroidery - cover the color and it still reads LiveQue climbing.

CONSTRUCTION

'LiveQue' in a bold grotesk; each glyph steps up by a constant rise (~0.15H) from left to right, so seven letters climb a full cap-height across the word - a stair ascending toward the Q and final 'ue'. Baselines are stepped, letters stay upright (no rotation). A filled live dot (diameter ~0.18H) sits at the peak just above the final 'e'. Optional weight ramp: lighter 'Live' into heaviest 'Que'. The Q is a standard circle + tail. Icon lockup: stack 'Q' + peak dot, or three ascending ticks forming a ...

Clash Display Bold (700) with stepped baselines and an optional Light-to-Bold weight ramp; alt Cabinet Grotesk Bold (Fontshare, free).

ON SWAG

App icon: three ascending ticks resolving into a Q, or 'Q' + peak dot. Sticker: the climbing wordmark as a dynamic diagonal silhouette (keep >=3mm border, near-convex cut). 1-color shirt: pure structure, no color needed - prints or stitches in one ink. Coaster: word climbs toward the ...

WHY #9

The only device that pictures the verb inside the word itself - letters step up into a live-capped Q, and the ascent is structural so it survives black, knockout, and stitch. REVERSED ON INK

ON BRAND TEAL

10 Coaster Seal

A bar beer-mat rendered as line-art: a double-ruled rounded-square coaster framing a 'wet glass ring' that resolves into a Q, with an amber cue dot where the glass stood.

WHY IT FITS

The coaster is the physical bar object and the condensation ring a glass leaves is a ready-made O - tilt it into a Q and the drink metaphor and the letterform become the same shape, a coincidence no competitor owns. The airy outline treatment reads craft/independent (the intimate-live pole) while the amber dot keeps the money-warmth. Deliberately un-round so it never collides visually with the coin concept or a real QR.

CONSTRUCTION

viewBox 100x100. Outer coaster frame = teal rounded square, 9..91 (82x82), corner radius 16, stroke 4. Inner beer-mat rule = second rounded square 15.5..84.5, radius 11, stroke 1.6 (the classic double border). Q = a bold teal ring, r21, stroke 7 (the wet glass ring / bowl) with a single straight teal tail, stroke 7 round caps, running 58,58 -> 75,75: it starts inside the ring (~r11) and exits past it (~r35) at 4:30, the universal Q signal. Counter is open; live dot = amber disc r5 dead-center ...

COLOR

Teal #17B7AE strokes; amber #F5A524 cue dot; ground near-black #0B0F12 or a cream coaster #FAFAF7. One-color fallback: all strokes #17B7AE, #0B0F12, or #FFFFFF knockout; drop the dot to the same ink and the wet-ring Q still carries it.

TYPE

ON SWAG

App icon: sits on a teal or near-black tile, the rounded-square frame echoes the iOS mask so the whole icon reads as one coaster. Sticker: square die-cut with rounded corners, cheap and durable. 1-color shirt: pure line-art screenprints in one pass with no knockouts to clog. Coaster ...

WHY #10

ON BRAND TEAL

Everything is vector. Print anything.

Every concept ships as three SVG files - dark-ground, light-ground, and one-color black - with all wordmark text converted to outlines, so no font is ever required by a printer. SVGs open in Illustrator, Figma, Affinity and any modern print RIP, and scale from favicon to stage banner with zero quality loss. This PDF is itself vector: a print shop can pull art straight from any page.

brand/logos/NN-name-dark.svg

For dark grounds: shirts on black, the app, stage banners, stickers on ink.

brand/logos/NN-name-light.svg

For white or kraft stock: table tents, coasters, invoices, light tees.

brand/logos/NN-name-onecolor.svg

Single-ink screenprint, engraving, embroidery digitizing, stamps.

Printing notes: teal is ~Pantone 3272 C for spot-color jobs; gold is ~Pantone 143 C. For embroidery, use the one-color file and drop details below 0.1 in. For screenprint on dark garments, use the dark-ground file. Ask any shop for "vector art" - hand them the SVG.
