

LIVEQUE BRAND IDENTITY · ROUND 2

**On-Air: slimmer, smarter,
and it beats.**

LiveQue

5 refined variations - deep research on simplicity and motion - a living beacon spec
Companion: [onair-demo.html](#) (open it - the logo is animating in there right now)

Simple is enough. Generic is not.

Four research agents dug into logo psychology, motion branding, responsive identity systems, and an adversarial critique. The headline: a bold rounded wordmark with one broadcast dot IS enough for LiveQue - processing-fluency research shows simple marks are recognized faster and liked more on first sight, and LiveQue's brand moment is exactly that: a stranger glancing at a QR sign in a dark, loud bar. A quasi-descriptive mark ("this is live") measurably helps unknown brands.

WHAT PEOPLE RESPOND TO

Fast processing, one ownable gesture, a story you can retell in one line: "the dot is the on-air light - when you scan, you're live." Animated logos lift recall ~15%, but only when the motion IS the meaning. A transmitter pulse on an on-air dot is exactly that.

THE WARNING

A plain teal dot on off-the-shelf Manrope is the "blanding" trap - half of fintech sets this font. Presence dots are everywhere (Slack, WhatsApp, Instagram LIVE). Recognition is not distinctiveness: the dot only becomes ours through exact color, exact scale, exact placement, and a signature behavior.

YOUR INSTINCT WAS RIGHT

The critique scored the current mark 7/10 and the static ring is the problem - redundant weight. The fix the research keeps arriving at: the ring should exist in TIME, not in the frozen logo. Delete it at rest; let it live in motion.

Four things make On-Air a 10.

1 · A SIGNATURE CADENCE

One codified pulse - a sonar ping, not a Shazam sine wave - with exact timing, easing and opacity, used identically everywhere. The cadence is the brand asset, like Netflix's ta-dum.

2 · A FUNCTIONAL DOT

The same dot is the app's real live-status light. It pings ONLY when a performer is live; idle, it dims. Fans learn: teal pulsing dot = the band is on. The logo stops being a picture and becomes a signal.

3 · THE Q CARRIES THE QUEUE

The dot decorates "Live" - the generic half of the name. The Q (the queue, the mechanic nobody else has) joins as the glyph-mark: the Q-dot bug for app icon, favicon and avatar.

4 · ONE BESPOKE DETAIL

Manrope stays as the skeleton, but at least one letter gets custom-cut - the Q tail is the natural candidate - so the wordmark stops being typeset and starts being drawn.

MOTION

The Ping: motion means on air.

A sonar-style beacon, not a blinker: the dot stays almost still (a 6% kick) while a hairline ring is born at its edge, expands to 2.5x, and fades. Pure CSS on transform+opacity - no JavaScript, negligible battery.

LIVE Performer on: ping at 2.0s, full teal. This is the only looping state in the product.

IDLE Off air: NO animation, dot dimmed to 60% - the lamp-off convention is what makes live mean something.

HOME Marketing homepage hero: the one exemption - relaxed ambient ping at 2.4s, so visitors meet the living logo.

TIP Money lands: one-shot gold override, 900ms - dot flips #F5A524, emits a single 3x gold ring, returns to teal. Gold never loops.

prefers-reduced-motion: static dot, ring frozen at 1.6x / 25% - the same "signature frame" used wherever motion cannot run (app icons, print). Favicons swap idle -> live icons instead of animating.

One dot, two hosts.

The broadcast dot is the constant; letterforms are its vessel. Full-size, it lives on the i in "Live." Small, it migrates into the Q - whose bowl IS the ring, for free. That solves the bulk structurally: nothing floats above the word, and the ring returns only where the dot needs presence.

A 

FULL WORDMARK

Header $\geq$ 32px cap height, invoices, OG images, table-tent masthead

B 

WORDMARK, NO RING

Smaller headers and lockups - the dot alone carries the signal

C 

Q-DOT BUG

App icon, social avatar, QR centerpiece - the bowl absorbs the ring

D 

FAVICON 16px

Hand-tuned raster: 2px bowl, 6px dot, tail simplified; idle/live icon swap

QR table tents: Q-dot glyph over the wordmark on ink; the QR always on an off-white panel with near-black modules - never teal-on-dark.

A Tittle

RECOMMENDED · RESEARCH RANK 1

Delete the static ring entirely. The resting mark is a confident tittle-dot; the ring exists only in time, as the animated ping.

GEOMETRY

Dot $r = 7.4$ at the exact native tittle position (66 units above baseline). Nothing else. The footprint above cap height drops from a 40pt badge to a 15pt dot.

WHY IT IS LIGHTER

Removes 100% of the ring ink and half the dot area. The word reads as one tight unit again - and the animation gains meaning, because the ring only appears when the brand is transmitting.

HOW IT BEATS

2.0s sonar ping: hairline ring born at the dot edge, expands to 2.5x, fades from 45% to 0. Dot kicks 6%.

VERDICT

The cleanest header lockup, the strongest research backing, and the best story: at rest it is calm; live, it broadcasts.

LiveQueue

LiveQueue

Q-Beacon

ICON SYSTEM · RESEARCH RANK 2

The dot migrates into the Q counter - the bowl becomes the permanent ring for free, on the one letter no competitor owns.

GEOMETRY

Normal i tittle restored. Dot $r = 6.6$ at the Q bowl center (758, 720 in glyph units). Zero added geometry above the word.

WHY IT IS LIGHTER

The ring you love is already drawn - it is the Q. Nothing floats above the wordmark, and the live signal rides the letter that carries the queue story.

HOW IT BEATS

On ping, the counter dot kicks and a hairline ring born at the bowl edge expands to 1.8x and fades - the Q literally broadcasts.

VERDICT

This is also the app icon answer: the Q-dot bug survives 16px, reads as a coaster, and ties live to queue.

LiveQue

LiveQue

Halo

THE STATIC-RING OPTION · RANK 3

Keep the dot+ring anatomy, but demote the ring to a barely-there hairline at 35% - atmosphere, not armor.

GEOMETRY

Dot $r = 6.2$; halo $r = 11.5$, stroke 2.0, opacity 35%. Perceived ring ink drops ~85% from the original.

WHY IT IS LIGHTER

For contexts that want the on-air ring visible at rest (posters, the signature frame) without the badge weight.

HOW IT BEATS

The halo itself is the pulse: it inflates and fades like an exhale, then re-condenses. Dot lifts to bright teal at each beat.

VERDICT

The compromise candidate - keeps the full anatomy you loved at a third of the weight.

LiveQue

LiveQue

DARK GROUND · LIGHT GROUND · BOTH SHIP AS OUTLINED VECTOR SVG

THE LITERAL BROADCAST · RANK 4

Replace the closed ring with two open arcs radiating up-and-out - transmission with direction, not a badge.

GEOMETRY

Dot $r = 6.2$; arcs at $r = 12.5$ and 19.0 , stroke 2.4 , at 55% / 30% opacity, spanning the up-right quadrant.

WHY IT IS LIGHTER

About 80% of the ring circumference is deleted, and what remains points somewhere - an open gesture, not a concentric target. Deliberately dodges the Shazam silhouette.

HOW IT BEATS

Da-dit transmitter cadence: dot blips, inner arc lights, outer follows 150ms later, both fade. No expanding geometry.

VERDICT

The most literal "satellite feed" read - your original spitball, drawn.

LiveQueue

LiveQueue

DARK GROUND · LIGHT GROUND · BOTH SHIP AS OUTLINED VECTOR SVG

The smallest dot plus one frozen radar blip - the ring caught mid-expansion at 18%, telling the motion story in a still.

GEOMETRY

Dot $r = 5.2$; blip ring $r = 13$, hairline 1.6, opacity 18%. The static mark whispers what the animation shouts.

WHY IT IS LIGHTER

Barely-there until you notice it - then you cannot unsee it. The ghost ring implies motion even in print.

HOW IT BEATS

Slower 3.2s cycle, tight radar blip that decays fast - calmer than the sonar, for quiet surfaces.

VERDICT

Best for premium prints and merch where the story should be discovered, not announced.

Ship A at rest. Let motion wear the ring.

PRIMARY LOCKUP

Variation A (Tittle) - the wordmark with the bare beacon. Site header, invoices, print.

ICON SYSTEM

The Q-dot bug (from D) - app icon, favicon, social avatar, QR centerpiece.

SIGNATURE FRAME

Where a static ring is wanted (posters, hero art): E's frozen blip, or B's hairline halo.

MOTION

The Ping, exactly as specced on page 4 - live-only, 2.0s, gold one-shot for tips. The demo file is the reference implementation.

Files: brand/onair/ - 15 outlined SVGs (5 variations x dark / light / one-color) + the Q-dot and dot bugs, plus onair-demo.html, the living animation spec. All vector, no fonts required by any printer.
